Weekly Record 9: Your Career in Business

Student	Assel Saginayeva, group AIB-2602
Company A / Company B	Ferrero Group (comparator) / JSC Bayan Sulu, Kostanay (focal company)
Assessed core reading	OpenStax Introduction to Business 2e, Ch. 8.1–8.5 and Ch. 17.1–17.5
Record type	Reduced record, fields 1–2 only. Fields 3–5 are developed in Assignment 4 (Argumentative Essay).
Capstone link	Section 5c: Workforce and career capability

1. Concept

Key terms: human resource management, HR planning, job analysis, job description, job specification, internal and external labour market, recruitment branding, selection, orientation, on-the-job and off-the-job training, performance appraisal, interpersonal skills, lifelong learning.

Chapter 8 shows HR as a chain of steps that go in order [1]. First the company plans how many people it needs and does a job analysis, which means studying what tasks a job really includes. From this come two documents: the job description (what the person does) and the job specification (what skills and knowledge the person needs). Then the company recruits from inside or outside, selects people through screening, tests and interviews, trains them and later checks their performance. You cannot skip a step: if the job analysis is wrong, every step after it is wrong too.

Chapter 17 moves the same ideas to me as a future employee [2]. Employers look for people skills, the ability to persuade and to think on your feet, teamwork and a plan for your own learning. The chapter also says that school is the place to practise these skills, not only to get a diploma.

Concept Check (my own words): What is the difference between a job description and a job specification, and how does AI change them? The description lists the tasks; the specification lists what the person must know to do those tasks. When AI takes over a task, like preparing a cocoa order, that task moves out of the description. But a new skill moves into the specification: checking the AI's suggestion and deciding when not to trust it. So the job does not disappear, but the person who fits it changes.

2. Application: Career Capability Portfolio

The artifact has three parts. Part A looks at the workforce side of the operating model I built for Bayan Sulu in Weeks 4–8. Part B is my own capability map. Part C is the CV and interview practice from the session.

Part A. Workforce implications of my Bayan Sulu operating model

The new production complex will add about 260 jobs [3]. Most of them are normal factory jobs, but some roles change because of the AI tools I proposed. For these roles the job analysis has to be done again.

Table 1. Roles affected by AI at Bayan Sulu

Role	What changes (my week)	New line in the job specification	Recruit from	Training
Supply planner	ERP and forecast tool suggest the weekly cocoa order; the planner approves it (W5)	Read forecast error; switch to the manual spreadsheet if error > 25%	Internal (current planners)	On-the-job, during the 8-week pilot
Line quality supervisor	AI camera rejects products on one line; supervisor checks every reject (W4)	Judge false rejects; log them for the vendor	Internal	Vendor course + shadowing
Export marketing	AI drafts ads in Arabic, English	Native-level Arabic to approve	External	Orientation on

specialist (Gulf)	and Kazakh (W6)	tone and halal wording		brand rules
Credit controller	AI flags export customers who pay late (W8)	Read receivables reports; talk to customers before any action	Internal (accounting)	Off-the-job, short credit course
HR recruiter	AI only books interviews; it never screens out people (W4)	Know the 2026 data law on automated decisions [4]	Internal	Legal briefing

The pattern is clear: AI removes preparation work, but every role gets a checking duty. That is why most of these people can come from the internal labour market. They already know the products and the customers, and they only need training on the new tool. The Gulf role is the exception, because Bayan Sulu does not have this language skill inside the company yet.

Part B. My own capabilities

Table 2. Human, business, digital and meta-capabilities

Type	Capability	Evidence from my records	My gap	Next step
Human	Accountable judgment	"Who decides" table (W4); AI-ethics rule (W2)	I sometimes accept a source too fast	Write down why I trust each number
Human	Persuading and presenting	A2 video essay; Strava pilot speech	I read from notes	Practise answers without notes before the defence
Business	Reading financial statements	W8 ratios and cash flow finding	No practice with full audited reports	Find the BSUL audited report on KASE
Business	Process thinking	Cocoa order maps (W5)	Only one process mapped	Map one export order end to end
Digital	Excel and data checks	W8 ratio table built in Excel	No pivot tables or charts yet	One online Excel course this term
Digital	Checking AI outputs	AI records in W6–W8; discrepancy audit	Hard to spot errors in meaning	Always ask AI to list missing information
Meta	Knowing when not to trust a model	25% error trigger (W7)	Mostly theory so far	Test it in the Capstone stress test
Meta	Lifelong learning	Weekly Records 1–9	No long-term plan	Set a 1-year learning plan in W10

Part C. CV and interview practice

I updated my CV with the course projects and practised three interview questions in pairs.

Table 3. Interview practice with AI feedback

Question practised	Feedback (Claude, AI-use Level 2)	What I will change
"Tell me about a time you found a mistake in data."	Strong example: two checks and real numbers. Say the result first (net income +4,439 million KZT, operating cash flow −2,384 million KZT), then how you found it. Keep it under one minute.	Use the Bayan Sulu cash flow example with real numbers
"How would you use AI in this job?"	Good order: human check first, then the pilot. Add one measure of success, for example cocoa stock in range in 90% of weeks, so the answer sounds testable.	Start with the human check, not with the tool
"Why do you want to work in Kazakhstan's food industry?"	The reason is clear but general. Name the company and one thing it does, so the answer does not fit every employer.	Shorter answer, one clear reason

What I learned this week: the skills that AI makes more valuable are the same ones Chapter 17 calls interpersonal and planning skills. A tool can prepare the order or the ad, but someone still has to explain it,

defend it and take responsibility. I want to be that person, so my plan focuses on speaking without notes and on reading real audited reports.

AI use: Level 2. I used Claude (Anthropic) to check my English and the table layout, and to give feedback on my three interview answers in Table 3. The roles, capabilities and plan are my own and come from my earlier records.
