AI-USE DECLARATION

Assignment 3: Photo Essay

Customer, technology and data systems reshaping value

Student details

Student name	Assel Saginayeva	**Student ID**	n/a
Group	AIB-2602	**Submission date**	18 Oct 2026
Company A	Ferrero Group	**Company B**	JSC Bayan Sulu

AI-use level and student responsibility

- Preparation of this assignment operates at AI-use Level 2 (supported, disclosed).
- Permitted with disclosure: brainstorming, structural feedback, language support, counterargument generation where relevant, and preliminary analysis.
- You must independently verify every claim, number and source and author the final analysis yourself.
- The individual defence operates at Level 1: no AI assistance of any kind.
- Do not upload the OpenStax textbook or the course core text to an AI system.

A. Overall AI-use status

☒ I used one or more AI systems while preparing this assignment. I have documented each use below.

☐ I did not use any AI system for this assignment. I have completed the integrity confirmations and final declaration only.

If you select "no AI used," do not leave the declaration blank: tick the second box and sign the final declaration.

B. AI systems register

List every AI system used. Add rows if needed.

AI system / model	Provider / version (if known)	Date(s) used	Purpose in this assignment
Claude Opus 5.5 (Anthropic)	Anthropic; used in the Claude Code desktop app	16 Oct 2026	Reading the A3 brief and suggesting a visual shot list; laying out an earlier workflow map, later replaced by my own Canva drawing; typing the Ferrero vs Bayan Sulu table in Visual 1; drafting the 400–500-word commentary and assembling the essay as a Word document from my own photos and artifacts; putting my existing Evidence Folder sources into one numbered IEEE list; drafting this declaration for me to check.
Claude (Anthropic)	Version not recorded	Week 6 (Oct 2026)	Weekly Record 6: finding key terms and a first version of the 4Ps comparison table, which is the base of Visuals 5–6.

C. Detailed AI activity and verification log

Record each materially different use. The declaration should show not only what the system did, but how you checked it and what you changed, rejected or corrected.

Part of assignment / activity	AI system	What I used AI to do	How I verified the output independently	What I changed, rejected or corrected
Planning the sequence	Claude Opus 5.5 (Anthropic)	Suggested a 10-visual shot list that follows the structure in section 5 of the brief.	Compared the list with the brief and with my Weekly Records 6–7.	I chose the final order, and which photos I take myself (Visuals 2 and 4).
Reference list	Claude Opus 5.5 (Anthropic)	Collected the sources already in my Evidence Folder into one numbered IEEE list that matches the visuals.	Checked each entry against my Evidence Folder and opened each link.	No new sources were added by AI; the numbering was matched to the source lines on the visuals.
Weekly Record 6 table (carried forward)	Claude (Anthropic)	Found key terms and made a first version of the 4Ps comparison table.	Checked Gulfood facts against the press release [4], the data law against [5], and the key terms against the OpenStax glossary [1].	Changed "current market" to "possible new market"; rewrote the text in my own words.
Commentary (all 10 visuals)	Claude Opus 5.5 (Anthropic)	Drafted the commentary for each visual in plain English from my	Checked every sentence, number and citation against my records and the sources [1]–[10].	Checked grammar

Part of assignment / activity	AI system	What I used AI to do	How I verified the output independently	What I changed, rejected or corrected
		Weekly Records 6–7, and assembled the essay Word document (487 words) around my own photos and artifact tables.		
AI-use declaration	Claude Opus 5.5 (Anthropic)	Drafted the entries in this form from my session history.	Read every entry and compared it with what I actually did.	Edited any entry that did not match my own process before signing.

D. Commentary, governance and transfer verification

Use this table for AI-supported claims, governance risks/controls, marketing interpretations and Company A → Company B transfer judgments.

Claim / risk / transfer judgment	Evidence or source used	How I verified it	Change made after checking
Claim: the Gulf is a possible new market for Bayan Sulu	[4] KazFoodProducts press release, 30 Jan 2026	Read the release: it reports B2B meetings at Gulfood, not signed contracts.	Described the Gulf as a possible market, not a current one (Visuals 1 and 3).
Risk: privacy. Control: use only loyalty sign-ups with consent; review within 48 h after a complaint	Week 7 risk register; [5] Morgan Lewis, 2026	Checked that the 2026 amendments limit decisions based only on automated processing and give people the right to object.	The 48-hour threshold is labelled as my proposal, not company data (Visual 9).
Risk: reliability. Control: compare forecast with real orders; a native speaker approves every ad; manual fallback above 25% error	Week 7 risk register; [7] NIST AI RMF 1.0	Checked that NIST requires clear human roles and oversight for AI systems.	The 25%/2-month trigger is labelled as my proposal, not company data.
Transfer: Pilot AI demand forecasting	[10] Alloy.ai press release on Ferrero USA	Confirmed that the source describes Ferrero USA, not the whole Ferrero Group.	Verdict limited to one product line and one UAE channel (Visual 10).
Transfer: Reject automatic pricing	[5] Morgan Lewis, 2026	Checked that the cited practice is not a documented Ferrero practice.	Relabelled it as a common industry practice; kept the legal reason for rejecting it.

E. AI-generated or AI-edited visual disclosure log

Complete one row for every visual that was generated or materially edited with AI. AI-generated visuals must also be labelled on the visual itself.

Visual no. / description	AI system	Generated / edited / other use	Labelled on visual? Yes / No	Source / attribution or verification notes
1, 2, 4 – my photos of the Bayan Sulu shop, Sauran St., Astana	None	No AI used; own photographs	Not needed	Own photos, 18 Oct 2026 [11]; not edited by AI.
1 – Ferrero vs Bayan Sulu table (next to the shop photo)	Claude Opus 5.5 (Anthropic)	Edited: AI typed the table from facts in my Week 1–2 records	Not needed – typed table, sources in caption	Every figure checked by me against [2], [3], [8]–[10], [15].
3 – Gulfood press-release screenshot	None	No AI used; own screenshot, cropped	Not needed	Screenshot of [4] taken by me [12].
5–6 – Week 6 comparison table, method and result	Claude (Anthropic)	Other use: AI helped make a first version of the table in Weekly Record 6	Not needed – final table checked and rewritten by me	Disclosed in Weekly Record 6; facts checked against [1], [4], [5].
7 – Workflow map (Gulf pilot line), drawn in Canva	None	No AI used; drawn by me in Canva	Not needed	My own diagram in Canva, based on my Week 7 artifact [14]; checked against [1], [5], [7].
8–9 – Week 7 review/fallback and risk register	None	No AI used	Not needed	Crops of my Week 7 artifact; sources [1], [5]–[7].
10 – Recommendation table	None	Typed by me from my Week 6 artifact, Section D	Not needed	Sources [5], [8]–[10].

F. Visual-source integrity check

☒ Every visual has a source line.

☒ Every third-party visual is openly licensed or used with permission and is attributed in IEEE style.

☒ Every AI-generated visual is visibly labelled as AI-generated on the visual itself.

☒ The commentary explains what each visual means for Company B rather than merely captioning what it shows.

G. Authorship and judgment reflection

One AI-generated interpretation, risk or visual idea I rejected or changed, and why:

An early AI draft described Bayan Sulu products as “halal food that fits buyers in the Gulf”. I checked the label myself in the shop: there is no halal mark and no Arabic text. So my essay now says halal certification is needed before a Gulf launch.

One verification step that changed my governance analysis or transfer verdict:

When I checked the sources for Visual 10, two practices in the draft (review scanning and automatic pricing) were not documented Ferrero practices. I relabelled them as common industry practice and kept the Company A comparison only for BigQuery, Alloy.ai and the Nutella labels.

One limitation in the available visual or data evidence that I disclosed:

The risk thresholds (48 hours, 25% for two months, half of a group’s share) are my own proposals for the pilot, not Bayan Sulu data. The Gulf market is based on B2B meetings only, with no signed contracts [4]. Both limits are stated on the visuals.

H. Assignment-specific confirmations

☒ The visual sequence and the order of visuals are my own curatorial choices.

☒ At least two governance risks and their controls are supported by my Week 7 evidence.

☒ My adopt / adapt / pilot / delay / reject verdict is my own evidence-based judgment.

☒ Every factual claim in the commentary is traceable to a checked source.

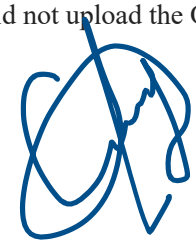

Final declaration

I declare that this form accurately records my AI use for this assignment. I independently verified the claims, numbers and sources for which I remain accountable, and I authored the final analysis and judgment submitted for assessment. Any AI support listed above was used only as disclosed in this form.

☒ I confirm that every AI system I used is listed in this declaration.

☒ I confirm that I did not fabricate, invent or knowingly submit unverifiable data, claims or references.

☒ I confirm that I did not upload the OpenStax textbook or the course core text to an AI system.
