Week 10: Capstone Project, Putting It All Together

Student	Assel Saginayeva, group AIB-2602
Company A / Company B	Ferrero Group (comparator) / JSC Bayan Sulu, Kostanay (focal company)
Assessed core reading	Integrative review: Learning Outcomes, Key Terms, Concept Checks and Summaries of the assigned chapters
Record type	No new Weekly Record this week (syllabus). This note keeps the workshop artifacts that join Records 1–9 and Assignments 1–4.
Capstone link	Section 8: 12-month roadmap · Section 9: Transfer stress test

1. Concept: integrative review

I went back through the chapter summaries and picked the one idea from each week that actually decided something for Bayan Sulu.

Table 1. One idea per week

Week	Key concept	What it decided for Bayan Sulu
1–2	Business environment; stakeholders and ethics	Start small, and write an AI-ethics rule before using AI
3	Business model; adopt / adapt / pilot / delay / reject	Not every Ferrero practice fits a mid-sized Kazakh firm
4	Management levels; who makes the decision	Every decision has a human–AI mode and one named owner
5	Operations planning; process maps	The system suggests the cocoa order, a planner approves it
6	Marketing mix; customer journey	Pilot AI ads in the Gulf; reject automatic prices
7	Information systems; data governance	Each risk has an owner, a trigger and a manual backup
8	Financial statements; cash management	Profit is not cash: operating cash flow was −2,384 million KZT
9	HR process; job analysis; career skills	AI changes job specifications, so training comes first

Concept Check (my own words): Which one idea connects all my weeks? AI can suggest, but a named person decides, and no plan grows unless the cash and the evidence say it can.

2. Application: workshop artifacts

2a. Company A / Company B transferability review

Table 2. What transfers from Company A to Company B

Ferrero practice	Why it works at Ferrero	Situation at Bayan Sulu	Verdict
AI nut sorting (TOMRA)	Huge volumes, high quality standards	Ready-made tool, quick effect on waste	**Adopt** on one line
Store-level demand forecasting (Alloy.ai)	Rich retail data in the US [4]	Less data; ERP-based weekly order is enough	**Adapt + pilot**
Customer segments in BigQuery	Big digital audience	Small online audience; Gulf is new	**Pilot** in one UAE channel
Supply-chain tracing and satellite checks	EU rules and palm-oil pressure	Not required for most of its 14 markets	**Delay**
7 million unique Nutella labels	Premium global brand	Mass-market, low price	**Reject**
Big projects paid from own cash	Very large, private group	Net cash only 1,956 million KZT	**Adapt**: use a credit line

2b. 12-month KPI roadmap (Capstone section 8)

The budget rule is my own: AI spending in year 1 should stay at about 10% of Bayan Sulu's 2025 capital expenditure (2,921 million KZT [1]), so about 290 million KZT. The split between quarters is my estimate (est.), not a supplier quote.

Table 3. Roadmap, January–December 2027 (total about 290 million KZT)

Quarter	Actions (from week)	Owner	Budget (est.)	KPI and gate
Q1 Jan–Mar 2027	Approve AI-ethics rule and risk owners (W2, W7). Check 2025 audited report on KASE and re-run ratios (W8). Start monthly cash report (W8). Start 8-week cocoa powder forecasting pilot (W5).	CFO; Head of Supply Chain	60 m KZT	5 of 5 risks have an owner. Forecast error measured every week; above 25% = manual spreadsheet.
Q2 Apr–Jun 2027	AI camera sorting on one line, supervisor checks every reject (W4). Go / no-go on forecasting. Late-payment alert pilot for export customers (W8). Train planners and supervisors (W9).	Production Director; credit controller	130 m KZT	Cocoa stock 30–60 days in 90% of weeks. Waste on the camera line down 20% (est.). Receivables grow no faster than revenue.
Q3 Jul–Sep 2027	Gulf pilot: AI drafts ads for one product in one UAE channel; a native speaker approves (W6). Extend forecasting to cocoa butter if Q2 gate passed.	Export Director	60 m KZT	Gate: operating cash flow positive in Q2. Zero ads published without human approval.
Q4 Oct–Dec 2027	Review every pilot: scale, fix or stop. Report KPIs to the board. Plan 2028.	CEO and board	40 m KZT (incl. contingency)	Current ratio ≥ 2.0; net margin ≥ 8%; operating cash flow positive two quarters in a row.

2c. Governance and verification audit

Table 4. Controls checked before the Capstone

Control	Comes from	Status
AI never sends an order, ad or rejection by itself	W4, W5, W6	In every roadmap step
Manual fallback if forecast error > 25%	W7 risk register	In Q1 and Q2 gates
Personal data reviewed within 48 h after a consent complaint	W7; 2026 data law [2]	Needed before Q3 Gulf pilot
Financial figures checked against the audited KASE report	W8 discrepancy audit	Open: page numbers still missing
Every AI use declared with system and purpose	Course AI policy	Done in all records

2d. Transfer stress test (Capstone section 9)

Changed assumption: operating cash flow stays negative in the first half of 2027, and the tenge loses about 15% against the US dollar, so imported cocoa costs more. Both are realistic: cash flow was already negative in 2025 [1], and cocoa is paid in foreign currency.

Table 5. What changes in the plan

Roadmap item	Original plan	Under the changed assumption	Why
Cocoa forecasting	Q1 pilot, scale in Q3	Keep and scale faster	Less stock in the warehouse frees cash
Late-payment alert	Q2 pilot	Move to Q1	Receivables are the biggest cash leak
Camera sorting	One line in Q2	Keep, but only one line in 2027	Waste costs more when cocoa is expensive
Gulf AI ads	Q3 pilot	Delay to 2028	Spending before cash comes back
Funding	Mostly own cash	Revolving credit line for seasonal cocoa buying	Keeps a cash buffer [3]
Total budget	about 290 m KZT	about 180 m KZT (est.)	Risk–return trade-off [3]

How my judgment changed. In Week 8 I first thought Bayan Sulu was safe because the current ratio is 3.53. Under this assumption I would put cash first and profit second. The AI projects that save cash go ahead, and the ones that only bring growth wait.

2e. Preparing for the oral transfer question

Practice question: Would your plan work for LOTTE Rakhat? **My short answer:** Partly. Rakhat is also a Kazakh confectionery maker, so the human-check rules and the data law are the same. But it belongs to a Korean group, so it may already have group IT tools and different funding. I would keep the controls and redo the finance part with Rakhat's own statements.

3. Verification and AI record

AI use: Level 2. I used Claude (Anthropic) to look for gaps in my roadmap and to play a board member asking "what if cash stays negative?", which became my stress test. All figures come from my Week 8 Excel table and the sources below. Budget amounts are my own estimates and are marked (est.).
